In regards to the proposed route 2.0 Powerlines.

The residents of Lillefjell do not want anymore construction sites, there are already power lines running across Otra to the north, and also smokestack chimneys to the south. Yet more construction will turn the area into an even more industrial looking area.

A further note is that there are rare birds of prey nesting on the proposed route. One on the west side of the Otra. We have sacrificed enough in this area and the environment should be left as it is.

Thanks in advance

Iain Molver
